DETAILED ACTION

Priority

1. This application lacks the necessary reference to the prior application to complete the continuity information. A statement reading "This is a 371 of PCT/US00/26442, filed September 27, 2000." should be entered following the title of the invention or as the first sentence of the specification and prior to the claim for benefit of priority to the provisional application.

Election/Restrictions

Applicant's election with traverse of Group I, SEQ ID NO: 8 in the reply filed on April 21, 2004 is acknowledged. The traversal is on the ground(s) that the two claimed sequences of SEQ ID NO: 6 and 8 are 98.9% identical. The traversal is found persuasive and both sequences have been searched and examined.

The amendment filed April 21, 2004 has been entered.

Claims 1-26 have been cancelled.

Claims 27-38 are newly submitted, and are drawn to the elected invention.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 27-38 are rejected under 35 U.S.C. 102(b) as being anticipated by WO 9748793 A1 (in IDS).

The claims are drawn to an isolated polynucleotide encoding a sterol delta-14 reductase wherein the polypeptide has an amino acid sequence of at least 85% sequence identity based on the Clustal V method of alignment when compared to SEQ ID NO: 6 or 8. Claims are also drawn to said sequence in a vector, cell or plant and methods of transforming cells or plants with said sequence.

WO 9748793 A1 teaches a sterol delta-14 reductase wherein the polypeptide has an amino acid sequence of 86.36% percent similarity or 79.87% query match to SEQ ID NO: 8, and 90.37% percent similarity or 80.66% query match to SEQ ID NO: 6. WO 9748793 A1 also teaches said sequence in a vector, cell or plant and methods of transforming cells or plants with said sequence (see pages 3, 19-21 and 26-30, for example). Given the absence of parameters for the Clustal V method of alignment, it appears that the sequence taught by WO 9748793 A1 falls within the scope of the claims, since different parameters can result in significant variation in the percent similarity and query match that is determined.

No claims are allowed.
